

Which Files Should I Use?

Quick reference card. For full details, see [docs/data_usage_guide.md](#) (../docs/data_usage_guide.md).

I want to... → Use this file

I want to...	Use this file
Compare P0 vs P1 vs P2	production_v2/tables/descriptive_statistics.csv
Get publication-ready comparison table	tables/table1_baseline_comparison.csv
See how RT changes with fleet size	tables/exp2_pivot_rt.csv
Check statistical significance	production_v2/tables/anova_results.csv + posthoc_comparisons.csv
Get effect sizes	production_v2/tables/effect_sizes.csv
Analyze capacity sensitivity	capacity_comparison/full_comparison.csv
View allocation heatmaps	heatmaps/heatmap_K*_policyP0_spatial_cap*.png (use P0_spatial !)
Check CBD analysis	cbd_focused_comparison/comparison_table.csv
Verify simulator correctness	simulation/verification/*.json
See validation pilots	simulation/validation_pilot/*.json
Get raw simulation data	production_v2/simulation/all_results_raw.csv
Use publication figures	figures/pub_fig*.png
See allocation maps	production_v2/figures/allocation_map_K*.png
Compare distance metrics	distance_comparison/comparison_table.csv

Status Legend

Symbol	Meaning
✓ CURRENT	Safe to use for analysis and reporting
⚠ LEGACY	Historical reference only — do not cite as current
📊 COMPARISON	Contains both current and legacy data for comparison

Folder Status at a Glance

Folder	Status	Notes
production_v2/	✓ SOURCE OF TRUTH	cap=2, spatial P0, 30 reps
simulation/	✓ Current	V&V + production experiments
tables/	✓ Mostly current	See README for legacy files
figures/	✓ Mostly current	pub_fig* for publications
capacity_comparison/	✓ Current	Full cap sweep
heatmaps/	✓ Current	Use P0_spatial for canonical P0
cbd_focused_comparison/	✓ Current	CBD experiment
distance_comparison/	✓ Current	Manhattan vs Haversine
maps/	✓ Current	K=40 allocation maps
optimization/	⚠ Legacy (cap=5)	Phase 3 historical

Common Pitfalls

1. **Don't use** `optimization/` **as current results** — it uses cap=5. Use `production_v2/` instead.
2. In `heatmaps/` **and** `capacity_comparison/`, files with `P0` (no `_spatial`) are the deprecated indexed P0. Use `P0_spatial` for the canonical baseline.
3. `capacity_sensitivity_heatmap.png` in `figures/` has a data format issue — use `capacity_sensitivity_heatmap_notebook.png` instead.

4. **Files ending in** `_notebook.csv` in `tables/` are from older notebook runs, not the production pipeline.
