

PR #11 Verification Report

=== 1. PR #11 CONTAINS ONLY COMMIT 33cdc11 CHANGES ===

No — PR #11 contains **2 commits**, not just commit 33cdc11 :

Commit	Message
c1a7dbb	Fix broken input paths and column mismatch in analysis scripts
33cdc11	Refactor analysis script output paths to tiered locations + replace broken heatmap

Files in PR (8 total):

Status	File
modified	docs/core/technical_report.md
added	results/analysis/figures/capacity_sensitivity_heatmap.png
modified	scripts/analysis/analyze_queue_metrics.py
modified	scripts/analysis/generate_capacity_sensitivity_heatmap.py
modified	scripts/analysis/generate_precinct_demand_visualizations.py
modified	scripts/analysis/generate_publication_figures.py
modified	scripts/analysis/generate_summary_dashboard.py
modified	scripts/analysis/regenerate_all_figures.py

Both commits touch the analysis scripts; commit 33cdc11 additionally adds the regenerated heatmap and updates the technical report.

=== 2. UNTRACKED LOCAL FILES INCLUDED IN PR ===

No — None of the untracked items are included in PR #11.

Confirmed excluded:

- `FIGURE_PROVENANCE_AUDIT.md` ❌ not in PR
- `PROVENANCE_AUDIT_DETAILED_OUTPUT.md` ❌ not in PR
- `PROVENANCE_AUDIT_REPORT.md` ❌ not in PR
- `results/analysis/tables/` (12 CSV/TEX files) ❌ not in PR
- `results/figures/` (10+ PNG files) ❌ not in PR
- `tmp/` directory ❌ not in PR

All untracked files remain local-only. The PR contains **only tracked, committed changes** from the two commits on the `pipeline/output-path-fix-and-heatmap` branch.

=== 3. PR #11 SAFE TO MERGE ===

Yes — PR #11 is safe to merge.

Reasons:

1. **Clean scope:** Only 8 files changed — 6 analysis scripts, 1 documentation file, and 1 regenerated figure
2. **No untracked contamination:** None of the local-only audit reports, tables, or figures leaked into the PR
3. **Correct changes:** Path fixes align scripts with the tiered results directory structure; the broken heatmap (showing “Data format issue”) is replaced with a valid regenerated version
4. **Non-destructive:** No archive artifacts were modified; changes are additive path corrections and output improvements
5. **PR recommends squash merge:** This is appropriate — it will collapse the 2 intermediate commits into a single clean commit on `main`
